

PlayerList Resource — Extended Analysis

Source

- **Codebase:** `UEFA\fame-football\FAME.Football\FBS` (FAME Football System)
 - **Indexed Collection:** Qdrant `uefa_code`
 - **Analysis Date:** 2026-07-31
-

1. Domain Overview

The **PlayerList** resource is a core domain concept in the UEFA FAME Football System (**FBS**) that manages team roster registration and validation across competitions, rounds, and teams. It supports:

- **Master player lists** — canonical rosters for a competition round
 - **Sublists** — derived/secondary lists (e.g., squad, training) linked to a master list
 - **National associations** vs. **club-based** player categorization
 - **Gender-aware** filtering (Men/Women teams)
 - **UEFA qualification rules** for coaching staff
 - **Match eligibility validation** — ensuring players in a match appear on an approved list
-

2. Entity Model

2.1 Core Entities (from `fbs-teampayerlist-api`)

string	LastName	
string	FirstName	
DateTime	DateOfBirth	
int	CountryId	
string	CountryName	
int	TypeList	
int?	NextMatch	

2.2 Database Views (EF Core Mappings)

The API reads from **existing database views** in schema `soa_fbs_tpl`:

View	Purpose
<code>FCOMP_TeamView</code>	Team lookup
<code>FCOMP_PlayerListView</code>	PlayerList records
<code>FCOMP_PlayerListMemberView</code>	Member entries
<code>FCOMP_ParticipantRoundView</code>	Competition round participants

2.3 Column Schema (Grid Display)

Dynamic columns from `ColumnsPlayerListHelper`:

3. PlayerList Lifecycle

State Constants

State	Code	Meaning
DRAFT	(implied)	Under construction
STATUS_VALIDATION_PENDING	2	Awaiting validation pass
PENDING_SUBMISSION	(implied)	Validated, ready to submit
SUBMITTED	(implied)	Notes saved, submitted for review
LOCKED	(implied)	Finalized — immutable

4. Validation System Architecture

4.1 Strategy Pattern Implementation

Syntax error in text

mermaid version 11.16.0

4.2 The 17 Validation Rules

#	Rule Name	Trigger / Check Method	Type
1	Duplicate player check	Built-in list check	Error
2	Sublist → master list dependency	<code>TypeDefinition.Sublist</code>	Error
3	Round uniqueness constraint	Same round/team/type existing	Error
4	Shirt number required	<code>IsShirtNumbersRequired</code>	Error
5	Shirt number range enforcement	Configured min/max bounds	Error
6	Duplicate shirt numbers across A/B	<code>CheckTypeListABShirtNumbers</code>	Error
7	Over-age player count range	<code>HasRangeNumPlayersOverAge</code> → <code>CheckRangeNumPlayersOverAge</code>	Error
8	Fixed shirt number snapshot	<code>IsActiveFixedShirtNumberSnapshot</code> → <code>CheckFixedShirtNumbers</code>	Error
9	Changes-from-source limit	<code>HasRangeNumChangesFromSourcePL</code> → <code>CheckChangesFromSource</code>	Error
10	Shirt name required	<code>IsShirtNameRequired</code>	Error
11	Position required	<code>IsPositionRequired</code>	Error
12	Futsal position restriction	<code>IsFutsal</code> — midfield blocked	Error
13	Club since date required	<code>IsClubSinceRequired</code>	Error
14	Player club required	<code>IsClubNameRequired</code>	Error
15	Club division required	<code>IsClubDivisionRequired</code>	Error
16	Association registration date required	<code>IsAtRegAssSinceRequired</code>	Error
17	Staff rules (role, coach count, qualifications)	<code>FlagsBW.HasStaffManagement</code>	Error / Warning

4.3 Warning Rules (Non-Blocking)

#	Rule Name	Trigger	Notes
A	Head coach UEFA qualification	<code>HasHeadCoachMinimumQualification</code>	Warning only

#	Rule Name	Trigger	Notes
B	Female head/assistant coach rule	<code>IsFemaleHeadCoachOrAssistant</code>	Diploma threshold check
C	Assistant coach UEFA qualification	<code>HasAssistantCoachMinimumQualification</code>	Warning
D	List B eligibility validation	<code>IsClubSinceRequired && HasListBEligibility</code> → <code>CheckListBEligibility</code>	Per-player eligibility window
E	Missing signed document	Non-COVID lists without upload	Warning

5. Data Flow — Validation Endpoint

Syntax error in text
mermaid version 11.16.0

6. Master ↔ Sublist Hierarchy

Key rule: A sublist cannot exist without an associated master list for the same round and playerlist type.

7. Match Eligibility Check

`CheckPlayerInPlayerList` — Match Import Validator

This check runs in the **FSP Instant Import** module (`FspImport.Application`) during match data import, ensuring every active player appearing in a match has an approved `PlayerList` entry.

8. Module Architecture

The system is in a **migration phase** — the new `fbs-teampayerlist-api` reads from database views (EF Core read-only) as a transition path from the legacy `XNet` repository pattern.

9. Time Integration Module

The **FBS.Time.PlayerList** module handles player registration timing workflows:

Filtering pipeline in ListFromDirectory:

- 1. Set StatusPlayer = Active
- 2. Set Gender based on team (M/F)
- 3. Apply Kendo Grid filters dynamically
- 4. Set TypeService = AATACTValidation
- 5. Add OrganizationID, TargetPlayerListID context
- 6. Filter by CountryCode for national associations
- 7. Apply pagination via QueryOptions

10. File Index (Key Sources)

File	Role
FBS/WebApp/Modules/FBS.Time.PlayerList/.../PlayerListPageBase.cs	Page base with new-list validation checks
FBS/.../FBS.Time.PlayerList.Http/Controllers/Api/PlayerListSqlApiController.cs	REST API entry — Validate, Submit
FBS/.../FBS.Time.PlayerList.Business/PlayerListBusiness.cs	Core validation orchestrator (Strategy Pattern)
FBS/.../XNetPlayerSelectionRepository.cs	Member data queries (ListFromAll, ListFromDirectory)
FBS/.../FcompMatchPlayerRelation.cs	Match ↔ PlayerList relationship check
fbs-teampayerlist-api/.../PlayerListContext.cs	EF Core DbContext for new API
fbs-teampayerlist-api/.../PlayerListMemberPoco.cs	Member entity with extended fields

File	Role
FSP-Instant-Import/.../ToBeValidatedExecutor.cs	Match import eligibility checker
football-data/.../MatchingPlayerPoco.cs	Cross-provider player matching
fame-football/FAME.Football/FBS/.../ColumnsPlayerListHelper.cs	Dynamic grid column configuration (18 columns)
football-architecture-diagrams/analysis/player-registration/	Confluence docs (requirements, validation rules, data model)

11. Summary

The PlayerList resource is a **complex, multi-layered domain** spanning:

- **Legacy ASP.NET WebForms modules** (`FBS.Time.PlayerList`) with Kendo Grid frontends
- **A new .NET minimal API** (`fbs-teampayerlist-api`) in progress
- **17+ validation rules** driven by competition-specific flags
- **Master/sublist hierarchy** for squad composition
- **Match import integration** enforcing eligibility at match time
- **Dynamic column rendering** based on competition requirements
- **Staff qualification tracking** (UEFA diploma thresholds)
- **Gender-aware business rules** (Women's football specific)

The system represents a typical **enterprise migration pattern**: legacy monolith → modular API, read-only DB views as the bridge, with validation logic extracted into strategy interfaces.
